

School Safety Checklist: How To Ensure Your School Is Safe Amidst A Threat

Take Action And Protect Every Person In Your School

Schools need to evaluate their crisis prevention plans on a continuous basis to ensure safety products are reliable and effective. School safety products need to offer simple, effective, and above all else, discreet solutions.

Before selecting school safety solutions, administrators need to ask the following questions:

- Is it easy to install?*
- Is it easy to use?*
- Does it work without a mobile device?*
- Is it accessible to every staff member?*
- Does it avoid revealing private information?*
- Is it discreet enough to go undetected if needed?*
- Does it have a 100% adoption rate?*
- Is it easily integrated with current systems and infrastructure?*
- Does it deliver location accuracy?*
- Can it operate independent of a wi-fi connection?*
- Does it notify administration and first responders?*
- Does it connect to intercoms and computer systems?*
- Does it communicate with every staff member?*
- Does it notify of a threat in multiple modes: visually and auditorily?*
- Do emergency services arrive in minutes?*
- Does it collect data for future planning?*
