

Reduce Risk. Strengthen Response.

The only complete safety platform designed to help state capitol complexes reduce operational risk, improve emergency coordination, and support continuity of operations across buildings, chambers, offices, and grounds.

State capitol complexes must remain open, accessible, and operational while protecting elected officials, staff, contractors, media, and the public. In these environments, reducing risk requires more than fast notification alone. It requires a complete system that helps teams activate help immediately, pinpoint incident location, coordinate response across the complex, and strengthen readiness over time.

Unique Safety Challenges in State Capitol Complexes:

- Open, public-facing environments require rapid incident awareness and coordinated response.
- Multiple buildings, chambers, and offices can make consistent safety coverage more difficult.
- Complex layouts can create blind spots and increase operational risk.
- Security, facilities, leadership, and support teams must coordinate quickly across shared spaces.
- Elected officials, staff, contractors, media, and visitors add daily operational complexity.

A More Complete Approach to Risk Reduction

The CENTEGIX Safety Platform® helps state capitol teams reduce operational risk by combining one-button wearable activation, precise location mapping, multi-modal notification, full-complex coverage, and actionable reporting in one coordinated system.

Enables Immediate Help

A discreet wearable badge lets staff request help through simple one-button activation, reducing delay and simplifying activation under stress.

Extends Coverage Across the Complex

Private managed networks support reliable coverage across buildings, offices, chambers, connected facilities, and surrounding grounds.

Improves Response Precision

Real-time incident mapping provides exact location details down to the floor and room level, helping responders act faster and with greater clarity.

Supports Ongoing Risk Reduction

Automated incident reports and analytics help identify trends, uncover safety gaps, and support decisions that may help reduce downstream legal or insurance-related exposure over time.

Reduces Operational Risk Across the Capitol Complex

- **Reliable Access to Help:** Unlike radios or fixed devices, a wearable badge is always on-person and ready when help is needed.
- **Coverage Without Gaps:** Protection extends across the full complex, including indoor and outdoor areas where traditional systems may fall short.
- **Low-Disruption Deployment:** The system installs quickly without major construction, helping teams improve safety without adding operational burden.

The Only Complete System for Coordinated Emergency Response

- **One Coordinated Platform:** CENTEGIX combines emergency alerting, incident management, facility mapping, visitor management, and ongoing support in one system.
- **Built for Cross-Team Response:** It helps connect security, command staff, dispatch, facilities, and leadership for faster, more coordinated action.
- **Designed for Public-Sector Reality:** The platform supports the reliability, simplicity, and continuity complex government environments require.

Proven in Complex Public-Sector Environments

- **Trusted in High-Visibility Government Settings:** CENTEGIX supports public-sector environments where speed, clarity, and accountability matter.
- **Proven in State Capitol and Corrections Environments:** CENTEGIX is proven in environments such as the Georgia State Capitol and Florida DOC, with additional state capitol implementations in progress.
- **Built for Complex Operating Environments:** The platform is designed for large footprints, hardened structures, and multi-stakeholder settings where response can be more difficult to coordinate.
