

Healthcare Workers Are Concerned About Their Safety

Despite ongoing efforts to combat workplace violence, workers continue to have ongoing personal safety concerns, often driven through first-hand experience.

A survey of more than **600 healthcare workers** reveals perceptions of safety, preparedness, and the role of technology in employee well-being and patient care delivery.

Of healthcare workers worry about their personal safety at least monthly.

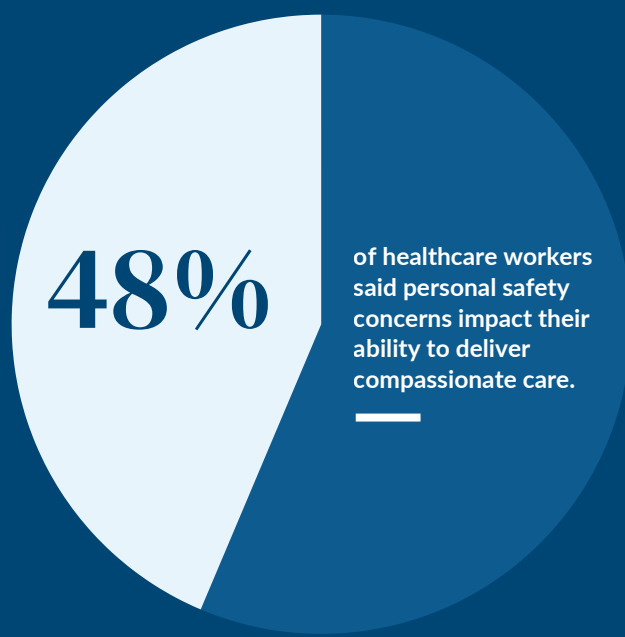

Of healthcare workers have personally experienced workplace violence in the past year.

Of healthcare workers have witnessed incidents of workplace violence in the past year.

Healthcare Workers Are Burnt Out – And Safety Is Playing A Role. The Result? An Impact On Patient Care.

75% of healthcare workers said they have experienced feelings associated with burnout in the last year. Among those, nearly two-thirds cited workplace violence and safety concerns as contributing factors.

of healthcare workers said personal safety concerns impact their ability to deliver compassionate care.

For Healthcare Workers, Safety = People + Technology

The Top 3 Safety Measures Preferred By Respondents

Safety Training Is Lacking

Even with the best technology, safety plans require frequent practice and training to be successful. Yet many healthcare workers haven't spent time preparing for an emergency.

of healthcare workers reported receiving both safety training and drill practice in the past year.

Wearable Duress Buttons: A Win For Workforce Safety

Compared to employees without access, those equipped with wearable duress buttons demonstrated

Higher perceptions of organizational support.

Greater feelings of protection.

Higher confidence in their organization's active-shooter response plans.

Healthcare Workers Want Support, Not Surveillance

Continuous monitoring via **real-time location systems (RTLS) devices** can foster a culture of distrust and leave employees feeling tracked rather than supported.

As a result, some healthcare workers opt out of wearing these devices. **This leaves organizations with costly technology that fails to deliver necessary safety coverage or a financial return on investment.**

Of healthcare workers prefer a wearable duress button **that only shares their location when they actively trigger an alert for help.**

Safety Impacts Employee Recruitment and Retention

of healthcare workers reported that safety and security measures are very important when considering employment at a healthcare organization.

How healthcare workers ranked workplace safety measures when considering their job satisfaction and willingness to remain in their role.

Healthcare Workforce Safety: Progress and Potential

While progress around workplace safety is being made, there are opportunities for improvement. Strengthening preparedness, expanding access to personal safety technologies, and integrating training, human support, and proactive safety strategies are keys to sustaining workforce confidence, well-being, and quality patient care.
